## Terms and Information

**TERMS OF PAYMENT**—1. **Cash Plan:** This plan earns 3% discount and free boxing. On bulky stock, boxing sometimes amounts to 6% or 8% so this plan earns a total of from 6% to 10% discount. Under this plan we book the order, reserve the stock until September 1st for Fall shipments and March 1st for Spring shipments. Bills are due on these dates and remittances should be received by September 1st, or March 1st to earn the discount. 2. **Partial Payment Plan:** Whereby one-third amount of order is remitted in advance and the balance goes forward freight or Express C. O. D. payable at destination. 3. **Charge Account Plan:** Goods will be shipped on charge account to customers of approved credit who supply satisfactory trade and bank references allowing time for investigation. Fall shipments Due December 1st. Spring shipments due June 1st.

**SHIPPING SEASONS**—Fall: Fall season opens as soon as we have had sufficient rain to put the ground in good condition for digging. Usually this occurs about the first week in September. The Fall season closes about November 15th. After that date the weather is usually very uncertain and ground liable to freeze solid. Spring: Spring season opens as soon as the frost is out of the ground, usually about April 1st, so we can start to dig, continuing until early May. By this date all stock is too far advanced in growth to take up and transplant successfully.

**PRICES**—Are limited to Spring, 1930, and supersede all previous lists and **ARE SUBJECT TO CHANGE WITHOUT NOTICE.**

**RATES**—Five of same variety and size at the ten rate. Fifty of the same variety and size at the 100 rate. Five hundred of the same variety and size at the 1,000 rate.

**BOXING AND PACKING**—Boxing and packing will be charged for at actual cost of material used except on cash orders. We make no charge for delivery to railroad station.

**SPECIAL NOTICE**—Correspondents are requested to use their printed business letter-heads. This list is for the trade only and in justice to our trade customers we use every possible effort to limit distribution of trade prices to those we know to be entitled to receive them.

**LOCATION**—We are situated in Northern Illinois, on well drained, rich, fertile soil, located 42 miles northwest of Chicago. Visitors are always welcome. For complete directions for reaching Nursery see page 44.

**SALES HELPS**—Descriptive catalog of evergreens, illustrated in color, sent free on request. Additional copies 50 cents each. "Conifer Comments," 64-page booklet of information on planting, culture, etc., 10 cents per copy. Evergreen Plate Book, see page 41.

**EXTRA CHARGE FOR PERSONAL SELECTION**—The prices in this catalog are for first-class stock, fully up to grade and as represented. Customers who wish to make personal selection and tag trees in the nursery may do so at an extra charge of 33 1/3 per cent.

**ORDERS CALLED FOR AT NURSERY**—Thursday of each week during the shipping season is set aside for orders to be called for at the Nursery. Orders should be in by Monday, to enable us to have them ready for delivery by Thursday.

We accept all orders upon condition that they shall be void should any injury befall stock from causes over which we have no control. Prices do not include any guarantee as to growth.

# Our 75th Birthday

**O**N the 75th birthday of the Hill Nursery we dedicate ourselves anew to the service of the nursery trade. It is our sincere purpose to give your evergreen dollars the fullest value in quality and in price, and to assist our trade customers in their selling problems.

Stock in this catalog is all produced in our own nursery, grown under proper conditions which we have developed during 75 years' experience as growers of evergreen trees.

When making comparisons with other stock on the market, do not compare prices only. *Be sure you are buying the best strains of evergreens, true to name, properly root-pruned and transplanted in the nursery, dug and handled under proper conditions and packed to insure safe arrival.*

We invite correspondence with anyone not thoroughly familiar with evergreens to whom we will gladly give, to the best of our ability, advice and assistance in making up lists of stock for planting in various localities.

If you do not have a copy of Hill's descriptive catalog showing fifty illustrations in natural colors, copy will be mailed without charge upon request.

Trees are listed alphabetically, according to their botanical names as given in Standardized Plant Names, prepared by the American Joint Committee on Horticultural Nomenclature.

In this catalog, which covers a complete range of sizes from the lining out grades to the specimen trees, we have presented to you

Authentic photographs of each variety.

Accurate descriptions on habits and hardiness.

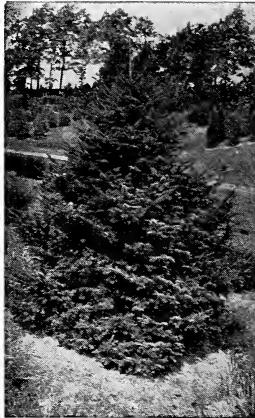

Detailed information on various sizes and prices.

The sizes you select depend upon your equipment for handling and how quickly you wish to obtain salable trees. Please note the following symbols and explanations of sizes offered:

- (o) Seedlings—Two years and three years old.
- (x) Once transplanted, seedlings, cuttings, or grafts, which have been transplanted and allowed to remain one or two years before being sold.
- (xx) Twice transplanted trees which have been moved twice in the nursery.
- (xx B&B) Twice transplanted trees which have been twice transplanted and dug with ball of earth and burlapped.
- (xxx B&B) Three times transplanted. (Trees in this department are intended for immediate landscape use).

*Abies arizonica*  
(Arizona Fir)

*Abies balsamea*  
(Balsam Fir)

*Abies concolor*  
(White Fir)

## FIRS

### *Abies arizonica* (Cork Fir)

This little-known and seldom-seen evergreen is really one of the most striking and beautiful of firs. The selected type which we grow comes from a very limited area in high altitudes in the northern part of Arizona. It makes a rather slender tree, reaching considerable height when fully matured. Foliage is of a decidedly silvery blue, easily mistaken for the Colorado Blue Spruce. The under sides of the needles are extremely whitish and light blue in color. The bark of the tree is most unusual, as it is almost pure cork and the older trees are of a light, creamy color.

	Each	10	100	1000
2-4 inch o 2 year.....	\$.....	\$.....	\$10.00	\$ 90.00

### *Abies balsamea* (Balsam Fir)

The foliage is of a dark green color above, silvery beneath. Makes a neat, pyramidal growth and develops quite rapidly. It is widely known for its extremely pungent odor. It is this tree that gives the "Balsam Odor" to our northern woods. When planted in dry locations, it is short lived, but in moist ground or a cool, sheltered location it develops into a fine specimen.

6-8 inch x Once Transplanted.....	.....	.....	8.00	70.00
-----------------------------------	-------	-------	------	-------

### *Abies concolor* (White Fir)

In his new book "Hardy Evergreens," Professor Schrepfer describes the Concolor Fir as follows: "This is the most satisfactory of the firs for general cultivation. The leaves are long and blue-green when young. It forms a compact, symmetrical tree, somewhat resembling the Blue Spruce. Older trees form narrow pyramids. It is the best fir for the Middle West, as it withstands heat and drought better than the others." The name "Concolor" given this tree by Dr. Englemann, signifies even color. Both the upper and under sides of the needles are grayish-blue in contrast to the usual characteristics of firs. We are careful to obtain our seed supply from Northern Colorado, which produces trees of the best type.

*Abies Fraseri*  
(Fraser Fir)

*Abies veitchi*  
(Veitch Fir)

*Abies homolepis* (Nikko Fir)

## FIRS (Continued)

### *Abies fraseri* (Fraser Fir)

The "Southern Balsam" is native in the Southern Appalachian Mountains, especially in North Carolina and Tennessee. It is a compact pyramidal grower, having dark green lustrous leaves, bluish-white beneath. The foliage is very fragrant. Under cultivation it is not a large growing tree, not reaching over 20 to 25 feet. In New England it does especially well. Small cones of purplish color before they are ripe.

	Each	10	100	1000
2-4 inch x Once Transplanted.....	\$.....	\$.....	\$ 5.00	\$ 40.00

### *Abies homolepis* (Nikko Fir)

"A handsome and promising tree in this climate (Massachusetts) is the Japanese *Abies Homolepis*. This is a large tree on the mountains of central Japan with dark green leaves, silvery white on the lower surface and violet purple cones. The largest specimen in the Hunnewell Pinetum is now 55 feet high with branches sweeping the ground. The Arboretum trees are smaller but already produce their handsome cones."—Arnold Arboretum.

This most excellent Fir should be more generally used, especially in the Eastern and New England States.

2-4 inch 0 2 year.....	.....	.....	6.00	50.00
------------------------	-------	-------	------	-------

### *Abies Sachalinensis* (Sakhalin Fir)

A lofty tree of pyramidal outline. Leaves bright green and lustrous above, with a white band on each side of the midrib beneath. It comes from the island of Sakhalin on the north of Japan. The wood is very valuable. Introduced to the Arnold Arboretum over 50 years ago, where it has proven hardy.

2-4 inch 0 2 year.....	.....	.....	6.00	50.00
------------------------	-------	-------	------	-------

### *Abies veitchi* (Veitch Fir)

Attractive slender habit. The bright, shiny green foliage is marked with two broad bands of white beneath so that the swaying of the branches produces a most unusual sight. It is a tree of Japanese origin discovered by John Veitch, the English Nurseryman, in 1860 in the Japanese mountains. While it is considered hardy in the northern states somewhat sheltered positions are recommended. One of the most rapid-growing of our firs. It is especially handsome when young.

*Cedrus deodara*  
(Deodar Cedar)

*Cedrus atlantica*  
(Atlas Fir)

## CEDAR (Cedrus)

### *Cedrus atlantica* (Atlas Cedar)

This variety from Northern Africa is one of the few African conifers grown in America. It is a tall, beautiful, majestic tree. The habit is slender and pyramidal. Introduced into America about 1840. Some trees are decidedly bluish or silvery in color, others green. Hardy as far north as New York. It is rare in cultivation but well worth growing where it will stand conditions.

	Each	10	100	1000
4-6 inch x Once Transplanted.....	\$.....	\$.....	\$10.00	\$ 90.00

### *Cedrus deodara* (Deodar Cedar)

Feathery artistic blue foliage, considered the most beautiful, ornamental Cedar for the Atlantic, Southern and Pacific Coast states. Deodar is a Hindu word, meaning Tree of Gods. Almost unrivaled in the grandeur of its pendulous and lithe branches. Broadly pyramidal in shape, rising to a slender, spire-like top. Sometimes known as Indian Cedar, as it comes to us from the Himalaya Mountains in Northern India.

4- 6 inch x Once Transplanted.....	.....	.....	6.00	50.00
6- 8 " x " "	.....	.....	8.00	70.00
8-10 " x " "	.....	.....	10.00	90.00

### *Cedrus libani* (Cedar of Lebanon)

When small the tree is of conical shape, regularly shaped outline with wide spreading branches, but as the tree increases in age it assumes a round, open head, a change from the beautiful to the picturesque. Aside from its ornamental value, it is of peculiar interest for its scriptural and historical associations. It is said to be the most hardy of the Cedrus family.

Ten acres of seed beds are not an everyday sight. This is the area which we devote to seed beds each year so that including the one year beds there are approximately twenty acres of seedlings in the Hill Nursery always on hand. The growing of seedlings in the Nursery is an operation to which we have devoted a great deal of thought and effort. No seed is planted except from definitely known sources.

*Juniperus chinensis*  
(Chinese Juniper)

A branch of *Daphne Cneorum* in flower

## DAPHNE

### *Daphne cneorum* (Rose Daphne)

A delightfully fragrant flowering evergreen shrub. It is a broad-leaved Evergreen keeping its leaves during the winter months. It comes through the winter perfectly when we have an abundance of snow, other years it requires some covering late in the fall as a winter protection. The fragrant pink flowers almost completely cover the plant early in spring. It blooms during April and extends until May. It blooms again in the fall months. This makes an ideal plant for rockeries or to plant among perennials. It does well either in a shady or sunny location.

14-16 inch xx Twice Transplanted.....	B&B \$1.75	\$16.50	\$150.00	\$.....

## JUNIPERS

### *Juniperus chinensis* (Chinese Juniper)

This native Juniper of Asia corresponds to our *Juniperus Virginiana* in America. It has many points of merit over the native species. It seems immune from severe winters and also has remarkable ability to withstand heat and drought. It does equally well in practically all parts of the country and in any situation except wet or poorly drained ground. Seedlings produce quite a variation in type. Trees vary from extremely narrow, columnar specimens to broad, cone-shaped, bushy trees. It usually forms a compact, pyramidal tree about 20 feet in height with bright green or glaucous, prickly needles. While it is not a new tree in cultivation, it has recently become very popular on account of its many fine qualities and its freedom from plant diseases and pests.

Juniperus pfitzeriana (Pfitzer Juniper)

Juniperus chinensis albovariegata  
(Whiteleaf Chinese Juniper)

## JUNIPERS (Continued)

### Juniperus chinensis albovariegata (White Leaf Chinese Juniper)

A new white tipped form discovered in the Hill Nursery. The new growth comes out in the spring with whitish tips to the branches, gradually changing to green.

	Each	10	100	1000
Grafts, 1 year .....	\$.....	\$.....	\$50.00	.....

### Juniperus chinensis pfitzeriana (Pfitzer Juniper)

This remarkable tree ranks as one of our most important evergreens of today. Its great popularity is due alone to the merit of the tree. It is a Juniper that thrives under many conditions. It succeeds in exposed locations, in the full sun and also does remarkably well in shady, protected places. It is equally satisfactory in the northern part of the country as well as in the extreme southern part of the United States. It was originated in Pfitzer's Nursery in Germany only a few years ago. There are different strains of this tree found in various nurseries, but we have obtained our original stock for propagating from Ludwig Spaeth, famous German horticulturist who introduced the tree to the trade. We can thus assure our customers of the robust, growing type. Its foliage is of an attractive greenish-blue. It has been our practice for a number of years to stake up the small trees in the nursery so that they develop into somewhat taller forms and would be the case if they are not staked. Trees which have never been staked up sometimes assume a very low, broad, irregular form, but by staking, they can be made to grow taller and thus fill a much more important place in landscape work.

## JUNIPERS (Continued)

### ***Juniperus chinensis prostrata* (Prostrate Chinese Juniper)**

A variety never before offered to the trade. This is a creeping form of Chinese Juniper grown from plants sent us several years ago from Highland Park, Rochester, New York. It has dark green foliage and is of a robust, hardy nature.

	Each	10	100	1000
Grafts, 1 year .....	\$.....	\$ 6.00	\$50.00	\$.....

### ***Juniperus chinensis pyramidalis blue* (Column Chinese Juniper)**

This variety was introduced to cultivation by the United States Department of Agriculture through the late F. N. Meyer, who discovered it in China. It forms a distinct, narrow pyramid with all the leaves acicular or needle-shaped. The foliage is remarkably decorative. There are two forms—the blue and the green—which we can now furnish in good plants of the true variety. Like other forms of *J. Chinensis* they are very hardy and also retain their desirable color effect during the winter. The habit of growth resembles the well known Italian Cypress. This tree offers to planters in colder climates the extreme narrow-growing form of Evergreens heretofore so much desired but unfortunately not obtainable in a dependable tree. We are glad to assure our customers of the absolute hardiness and dependability of this excellent variety.

***Juniperus chinensis sargentii***  
(Sargent Juniper)

***Juniperus chinensis pyramidalis***  
(Column Chinese Juniper)

*Juniperus communis*  
(Common Juniper)

*Juniperus communis depressa*  
(Prostrate Juniper)

## JUNIPERS (Continued)

### *Juniperus chinensis sargentii green* (Sargent Juniper)

First collected by Professor Sargent in Japan in the autumn of 1892. This Juniper forms a low dense mat of wide-spreading branches covered with small dark green scale-like leaves, mixed with pointed ones. In the Arboretum it is now the handsomest of the Prostrate Junipers. Through the courtesy of Professor Sargent we are able to offer a genuine, true-type Sargent Juniper. This is a rare tree that will help lift your evergreen plantings out of the common-place. Likes plenty of sun.

### *Juniperus communis* (Common Juniper)

This is an upright form of the Common Juniper of Europe. It grows narrow and pyramidal and has light green foliage. It is especially desirable for planting in the southern states, but is also quite hardy and is used in other localities. This is the mother plant of quite a number of other Junipers including the Irish and Swedish Junipers. It does especially well on well-drained soil, fully exposed to the sun.

6- 8 inch o 3 year .....	.....	.....	4.00	30.00
--------------------------	-------	-------	------	-------

### *Juniperus communis depressa* (Prostrate Juniper)

The well-known, valuable, many-stemmed Dwarf Juniper. Rarely exceeds 2 feet in height, good form of Juniper for ground cover. It is at home on sandy or gravelly hillsides fully exposed to the sun, where single plants often reach 15 feet or more in diameter. The name *Juniperus Canadensis* is a synonym. Grows native in various sections of the country, but we obtain our seed from Northern Wisconsin, which produces a superior type.

1½-2 " xxx Three Times Transplanted.....	B&B 2.50	22.50	.....	.....

### ***Juniperus communis depressa plumosa* (Andorra Juniper)**

This tree was discovered in a shipment of *Juniperus communis depressa* sent to the Andorra Nursery, Philadelphia, Pennsylvania, about 1907. It has proven a most satisfactory, low-growing Juniper. It never loses its foliage in the winter, never burns out, and throughout the whole year carries a most attractive color. As soon as the frost comes in the Fall, it takes on an unusually attractive, rich purple-bronze color. It is not the brownish cast sometimes objected to in the Redcedar, but a real reddish-purple hue, entirely distinct in this respect from all other evergreens. The Spring and Summer color is a rich, bright green. It seldom raises its branches over 18 inches off the ground. For this reason it is an ideal specimen for use in the location where it is at the base of taller trees. Should be planted in the sun. It is still quite rare in nurseries and stocks are limited.

***Juniperus communis depressa*  
Vase Shaped Form**

***Juniperus communis hibernica*  
(Irish Juniper)**

## JUNIPERS (Continued)

### ***Juniperus communis depressa prostrata***

Another new introduction offered for the first time this year. In this form we have developed a type which rests flat on the ground. It also shows a tendency toward increased hardiness with no loss of winter foliage.

	Each	10	100	1000
Grafts, 1 year .....	\$.....	\$.....	\$60.00	\$.....
10-12 inch xx Twice Transplanted.....	B&B 2.25	20.00	.....	.....

### ***Juniperus communis hibernica* (Irish Juniper)**

One of the old, familiar evergreens which has been in cultivation for ornamental purposes a great many years. Very formal in outline and invaluable in Italian gardens or where architectural features are to be strongly emphasized. Foliage glaucous green. Grows 6 to 8 feet in height and not over one and one-half feet in diameter. Not hardy in the extreme north. The structure of the tree is different from other trees in that it has, instead of a single stem, numerous branches which grow upright from the base of the tree. This makes it more or less subject to injury from heavy snow and storms.

One of the most valuable and interesting new introductions of recent years is the Andorra Juniper. This leading dwarf variety has many excellent points of merit which have given it an immediate acceptance among nurserymen.

*Juniperus excelsa stricta*  
(Greek Juniper)

*Juniperus horizontalis douglasi*  
(Hill Waukegan Juniper)

*Juniperus communis suecica*  
(Swedish Juniper)

## JUNIPERS (Continued)

### *Juniperus communis* (Swedish Juniper)

A columnar narrow grower resembling Irish Juniper. Grows somewhat higher and is of a lighter or more bluish color. A pleasing and very useful tree for formal uses in lawns and gardens.

### *Juniperus excelsa stricta* (Spiny Greek Juniper)

"This beautiful variety forms a tall, dense, narrow, conical head, tapering gradually from the ground to a sharp terminal point; and is of a fine glaucous color. It originated in the nursery of Messrs. Rollenson at Tooting, England, and is quite hardy."—Gordon.

The mother tree, *Juniper excelsa*, is a native of Greece and Asia where it is an old well-known variety. The growth is slow so that the tree is well adapted for foundation plantings, rock gardens, or other situations where small or dwarf trees are required.

### *Juniperus horizontalis douglasi* (Hill Waukegan Juniper)

An interesting creeping Juniper. Very low and compact, making a dense mat. Soft blue color in spring and summer, changing to a rich purple color in late fall. It grows close to the ground, not over 6 to 8 inches high, but spreads out a dozen feet or more, depending upon soil and planting conditions. The type we grow is an especially attractive form selected from the native plants.

*Juniperus japonica*  
(Japanese Juniper)

*Juniperus sabina* (Savin Juniper)

## JUNIPERS (Continued)

### *Juniperus japonica* (Japanese Juniper) (Procumbens)

The following description is taken from a bulletin of the Arnold Arboretum, Harvard University: "This is the best known of the prostrate Junipers which Japan has sent to the gardens of the West. It is a plant with wide-spreading procumbent stems, blue-green, sharply pointed leaves marked on the upper surface by two white lines. It is perfectly hardy." Reaches from 10 to 15 feet in diameter, but can be kept smaller by trimming. It never grows over 8 to 12 inches high, but makes a rapid growth of long branches that cling to the ground. This variety can be used in almost any planting—for beds, for low borders, terraces, hillsides and rock gardens, as it thrives even under adverse conditions. There is considerable variance among varieties offered as Procumbens, but we are careful to propagate only from the true strain of hardy, compact growing plants we imported direct from Japan.

## JUNIPERS (Continued)

### **Juniperus sabina (Savin Juniper)**

A low, many-branched shrub, sometimes growing four feet high. It is native in the lower Alps in southern Europe. It also occurs in the Pyrenees, in Spain and in Greece, but always as a mountain plant. Its branches are spreading, dense, much ramified and abundantly furnished with short, straight, tufted branchlets, which are well clothed with foliage. Its berries are blackish-purple or dark violet in color, about the size of small currants. Planted 4 to 6 feet apart, it forms an excellent border to larger evergreens in the background. It is also desirable as a low tree in foundation groups and beds of evergreens in general. It does well in smoky atmospheres.

### **Juniperus sabina horizontalis (Bar Harbor Juniper)**

A true creeper, resting close to the ground. This interesting Juniper, native to the Coast of Maine, has been brought to American planters through the Arnold Arboretum. It has a greenish-blue color, described as "marine blue." This tree is one which has learned to live under adverse circumstances through winters of exposure of the bleak, rock-bound sea coast. For this reason it is of exceptional merit on account of its sturdy constitution.

For many years the Savin Juniper has been a leading dwarf Evergreen in the Hill Nursery.

*Juniperus sabina horizontalis*  
(Bar Harbor Juniper)

*Juniperus sabina tamariscifolia*  
(Tamarix Leaved Juniper)

## JUNIPERS (Continued)

### *Juniperus sabina tamariscifolia* (Tamarix Savin Juniper)

An excellent creeping dwarf variety. The foliage is fine in texture. Average height is one foot, with a spread of 6 to 8 feet when full grown. Sometimes called "Gray Carpet Juniper" and the name "Tamarisk-leaved Juniper" is also applied to it. A very vigorous grower, forming a compact and perfect mat of bluish or gray-green. Grows very dense and never changes in color. Our stock is propagated from the true stock from the Kew Gardens in England. It is said to occur wild in Sicily, Greece and other places.

### *Juniperus sabina von ehron* (Von ehron Juniper)

An interesting and rare variety very seldom seen in nurseries. It has a very compact, pretty, low form, bearing both juvenile and adult foliage. Branches are upright and wide-spreading. Has a tendency to make very irregular growth so that it is very picturesque and thus especially suited for Japanese Gardens and rockeries.

Grafts, 1 year .....	.....	.....	65.00	.....
----------------------	-------	-------	-------	-------

Von Ehron Juniper

## JUNIPERS (Continued)

### *Juniperus scopulorum* (Colorado Juniper)

This species of Juniper has a tendency to produce a large proportion of trees with beautiful blue foliage. At the same time it is quite variable in habit, producing many variations. It is narrow, compact and symmetrical. It has one single stem, in contrast to some varieties of Junipers with several stems. This makes it safe from heavy snows and wind. The inner foliage does not turn brown but remains a good healthy color throughout the tree. It is a tree that thrives in dry weather. In fact, the beautiful coloring of the tree is more pronounced during the hot, dry season than other times during the year.

*Juniperus squamata meyeri*  
(Meyer Juniper)

*Juniperus virginiana*  
(Redcedar)

## JUNIPERS (Continued)

### *Juniperus squamata meyeri* (Meyer Juniper)

The late Frank N. Meyer, plant explorer of the U. S. Department of Agriculture, found this tree in China. The original trees were distributed by the United States Government. It has also been called "Fish-back Juniper." It has a most unusual color and habit. The leaves are plump, pointed and prickly, and of bright, shining blue color. The foliage appears of different colors when viewed from various angles. There are distinct tones of green, white and pinkish-red, making it the most striking in color of any evergreens. It grows in an irregular form, some trees being more of a low-spreading habit than the picture shown. It makes an ideal planting for the rockery or around a pool. It never fails to attract attention.

### *Juniperus virginiana* (Red Cedar)

This tree hardly needs a description, as it is one of our oldest, most popular and best-known evergreens. However, there is a wide variation in habit among the Redcedars, depending upon the particular strain of the tree or the locality where the seed is gathered. We are propagating a close-growing, compact, distinctly pyramidal form and have made a specialty of this tree for many years, exercising great care in its growth. Widely used as an under stock for grafting Junipers.

*Juniperus virginiana elegantissima*  
(Gold Tipped Redcedar)

*Juniperus virginiana glauca*  
(Silver Redcedar)

*Juniperus virginiana cannarti*  
(Cannart Redcedar)

## JUNIPERS (Continued)

### *Juniperus virginiana cannarti* (Cannart Redcedar)

The leading form of Redcedar, having deep rich green, heavily tufted foliage. It makes a pyramidal specimen of middle size, reaching 15 to 20 feet. It can be readily trimmed and thus maintained at any size wanted. If left untrimmed, the growth is more or less open, but none the less pleasing. Some trees bear blue and silver berries which adhere late in Autumn and are greatly enjoyed by the birds. An absolutely hardy tree, propagated usually by grafting.

3- 4 " xxx " " " .....	B&B	6.25	60.00	.....

### *Juniperus virginiana elegantissima* (Goldtip Redcedar)

Here is a tree that will give variation to the green and blue colors of other Evergreens. It is rather broad and bushy, with slightly drooping foliage. In the spring when the new growth comes out it is a rich creamy golden color on the tips, gradually darkening to bronze and green as the season progresses. Unless kept low by trimming, it will grow 10 to 15 feet high. It has the characteristic Juniper foliage, soft and lacy, easily trimmed. It is beautiful in combination with almost any other variety.

Hill Pyramidal Juniper

Juniperus virginiana schotti  
(Schott Redcedar)Larix europa  
(European Larch)

## JUNIPERS (Continued)

### Hill Pyramidal Juniper (*Juniperus virginiana pyramidalis*)

A new introduction by the D. Hill Nursery Company. In habit, it is distinct from other varieties of Junipers, forming a close-growing, pyramidal tree, very slender. The foliage is a rich green and retains this color throughout the winter. On account of the symmetrical growth, Hill's Pyramidal Juniper is of particular value in formal gardens, and in landscape work where a tall evergreen is desired. A novelty of real merit.

Few Evergreens surpass White Spruce in its shapely, symmetrical form. This year we offer sizes for landscape work, as well as a wide range of grades for lining out.  
This recent photograph shows 2-3 and 3-4 foot specimen trees.

## SPRUCES

### *Picea canadensis (White Spruce)*

A native of the northern part of America, its range, extending to the coasts of the Arctic Ocean, attaining heights from 25 to 50 feet. It is thoroughly hardy, free-growing, not particular about soil, but does well in moist or dry situations. A compact and upright grower of great longevity. Trees over fifty years old remain well branched at bottom, retain their pyramidal form and annually make an upward growth. It will grow on a great variety of soils, bear crowding well, and also stand severe trimming. Being a native of cold climates, it grows most successfully when planted north of a line from Philadelphia to St. Louis.

## **Picea canadensis albertiana** (Black Hills Spruce)

The Black Hills Spruce is hardiest of all Spruces, symmetrical, compact and bushy of growth, in fact, the very smallest trees soon form round sturdy, compact bodies. As the tree grows and develops, it continues to carry this particular style of growth and generally becomes the most compact-growing specimen of the Spruce family; even in old trees the lower branches are retained, thus forming a close ground-cover. Botanically, the Black Hills Spruce is considered a close relative of White Spruce, having developed its distinct characteristics through long centuries of living in the Black Hills country of Dakota. The foliage varies from green to a bluish tint, and all trees are remarkable for their bright, fresh color. Black Hills Spruce was first introduced to commercial culture by Mr. D. Hill many years ago and has since become widely planted throughout the country.

**Black Hill Spruce.** Our supply of Black Hill Spruce for Fall of 1929 and Spring of 1930 is the largest stock that we have had for several years. We can assure our customers of the extra fine quality of these trees. They are a mighty thrifty lot.

*Picea excelsa*  
(Norway Spruce)

*Picea polita*  
(Tigertail Spruce)

## SPRUCES (Continued)

### *Picea excelsa* (Norway Spruce)

For many years Norway Spruce has been highly appreciated because of its rapid growth, its thriftiness, and its heavy masses of deep green foliage. Some of the finest old hedges are of Norway Spruce, as the trees can readily be pruned to any desired height. On farms and around homes all over the country, Norway Spruce windbreaks are giving substantial protection to stock and buildings. Norway Spruce is a tall, picturesque, and hardy tree, graceful in all its lines, and well adapted to planting over a wide range of territory. As the Norway Spruce prevails over a wide range of European territory, there are many sources from which to obtain seed. Careful experiments and close study for many years have proved to us that seed from the higher elevations insures a superior type for America, therefore, we use this seed exclusively.

### *Picea polita* (Tigertail Spruce)

A rare species, one of the most distinct and beautiful of the spruces, and when once seen is not apt to be forgotten or confused with any other. Though stiff in habit of growth, yet the branches being irregular of length cause the tree to be of informal outline. It does not grow rapidly and is therefore suitable for rather confined spaces. Seed is obtainable only at very rare intervals and this is an opportunity for nurserymen to obtain stock while our very limited supply lasts.

## SPRUCES (Continued)

### *Picea pungens* (Colorado Blue Spruce)

A leading specialty with us. The stock offered below is nursery run, containing both blue and green trees, except the larger ones as indicated. Our careful collection of seed from the bluest trees insures an unusually high percentage of blue trees. We obtain our seed from the northern Colorado Rockies, which insures the finest type of this variety.

The following are Nursery run containing both blue and green trees.

## PINES

### *Pinus montana uncinata* (Large Swiss Pine)

An upright form of the Mountain Pine found growing naturally in Italy, also abundant in the Spanish Mountains. It differs from the Mugho Pine in that it has a main stem, or leader, which predominates the tree; the other branches growing closely up around it in successive lengths, forming a compact, conical-shaped Pine, broad at the base and tapering at the top. Fills a unique place in landscape work.

*Picea pungens*  
(Colorado Blue Spruce)

*Pinus Montana Uncinata*  
(Large Swiss Pine)

When you buy Mugho Pine from the Hill Nursery, you may be sure of receiving stock fully up to grade and quality specified. These sizes for lining out are produced in immense quantities so that we are able to deliver to our customers every plant a strong, thrifty, full-of-life tree.

### **Pinus mughus (Hill Mugho Pine)**

Our own introduction. It is the genuine, true dwarf type, many stemmed, compact, with good dark green color, which it retains throughout the winter. Inferior forms of this variety offered as *Pinus mughus* are on the market, some of which are loose, open growers and some of upright, irregular habit. The seed is obtainable only at great expense in small quantity, because of its scarcity.

*Pinus nigra*  
(Austrian Pine)

*Pinus ponderosa*  
(Ponderosa Pine)

## PINES (Continued)

### *Pinus nigra* (Austrian Pine)

The leaves are two in a sheath, straight and slender, from 4 to 5 inches long, and of such a deep, rich green color that it is known in some parts of the world as the "Black Pine." No tree shows such remarkable resistance to the trying conditions of city planting. Coal, gas and smoky atmospheres have no effect on its growth. It is a tree equally satisfactory for seashore planting and for the inland country. In old trees planted in the open, the diameter of the branch-spread often nearly equals the height of the tree, but in the native forests of Austria and other parts of Europe it makes a tall tree often over 100 feet high. Annual growth has been observed to be, under favorable conditions, from 12 to 18 inches or more.

### *Pinus ponderosa scopulorum* (Ponderosa Pine)

Sometimes called Bull Pine or Western Yellow Pine. The most widely distributed evergreen of North America. The type found growing in the Black Hills of South Dakota, from where we obtain our seed, is a much superior type, being a hardy, free, upright grower. Very deep-rooted and drought resistant. It is a handsome, ornamental tree, with interesting long needles.

*Pinus strobus*  
(White Pine)

*Pinus sylvestris*  
(Scotch Pine)

## PINES (Continued)

### *Pinus strobus* (White Pine)

The White Pine is the largest of all conifers native to the eastern part of the United States. The crowns of mature White Pines in mixed forests conspicuously overtop the surrounding hardwoods. It readily adapts itself to both dry and moist soils, for it is found on the poorest and driest sand, and on steep, rocky slopes, and also on moist clay flats and river bottoms. White Pine can endure considerable shade for a number of years, but as it becomes older it requires more and more light for its development. It grows rapidly and has long, flexible needles, whitish beneath.

### *Pinus sylvestris* (Scotch Pine)

This well-known tree, though tall, seldom grows straight, and the branches shoot out rather obliquely. The bark is rough and cracked and the leaves are short, pungent, concave on the upper surface, convex on the under, and of a pale green color. This is the common Pine of Europe where it has been a valuable tree for timber and ornament for centuries. It is familiarly known in Scotland as "Scot's Fir." The rapidity of growth, great hardiness, and the facility with which it may be grown on almost all soils, has rendered this tree a great favorite. However, it prefers a cool, gravelly subsoil that is well drained, and will then form a handsome tree. It always inclines more to the picturesque than to the beautiful. We obtain our seed from Sweden where the best form grows, exactly suited to American conditions.

### *Pinus thunbergii* (Japanese Black Pine)

A large and handsome tree of Japanese origin. Widely planted in Japan. A picturesque tree with wide spreading branches forming a broad irregular head. A good seashore or barren ground pine.

6- 8 inch o 2 year.....	.....	.....	3.50	25.00
-------------------------	-------	-------	------	-------

### *Pseudotsuga douglasii* (Douglas Fir)

Since first discovered in the year 1791, the Douglas Fir has been known by nearly thirty specific and varietal names. It was subsequently found in 1827 by David Douglas, a Scotch explorer, and was later named in his honor. There are two distinct forms of Douglas Fir—one the dark green, gigantic-growing timber tree of the northwestern Pacific Coast area, and the other type from Colorado. The latter variety is the one recommended, both for its hardiness and its great beauty. The typical form of young trees is an open, broad, sharp-pointed pyramid; the lower branches are straight or somewhat drooping, and the middle or higher ones trend upward. Our plants are the type from northern Colorado, the seed being collected in deep gorges of high altitudes, where the blue and silvery foliage is characteristic. The growth is compact and symmetrical with rather short needles, in contrast to southern Colorado and New Mexico types which are of doubtful hardiness, irregular, and open-growing. It reaches 60 feet or more in height, with a spread of branches 12 to 18 feet. It is a rapid grower and thrives well in almost any situation. Plant with plenty of room for future development.

## YEWS

### *Taxus cuspidata* (Japanese Yew)

A distinctly valuable Yew, growing 40 to 50 feet high. Under cultivation, somewhat smaller. Has been cultivated throughout Japan from time immemorial, and introduced into America many years ago, having taken its place as one of the most noteworthy and valuable on the entire list. Originating in the cold, high altitudes of Northern Japan from where we obtain our seed, it is found fully able to successfully withstand extremes of heat and cold in America. Grows close, upright and compact. Foliage dark green, fruit bright scarlet.

*Pinus Tanyosho globosa*  
(Japanese Table Pine)

*Pseudotsuga douglasii*  
(Douglas Fir)

## YEWS (Continued)

### *Taxus cuspidata nana* (Dwarf Japanese Yew)

Similar to *Taxus cuspidata*, but is very dwarfish and compact-growing. The foliage consists of little bunches of black-green foliage. Of irregular and picturesque outline, ultimately becoming 2 to 3 feet high and 5 or more feet wide. Absolutely hardy. It retains its rich, dark green color entirely, throughout the winter. Will remain dwarf and grow more attractive with age. Very long-lived.

## ARBORVITAE

### *Thuya occidentalis* (American Arborvitae)

The American Arborvitae is the mother tree from which upward of fifty distinct types have been developed, varying in color from deep green to bright golden and ranging in size from little dwarfs to tall, pyramidal specimens. The native forests of Arborvitae have long been of great commercial value for timber, producing tall, straight trunks much used for telegraph poles. The Arborvitae is very hardy and dependable in almost any situation. A moist location is preferred. Stands trimming well, and for this reason is widely used for hedge purposes. The rate of growth and ultimate height depend largely upon conditions. It usually grows bushy at the bottom and tapering toward the top. Foliage is very soft and flexible and of fine deep green color. Covering such a wide range in its native growths, trees from some sections are open-growing and undesirable, but we are careful to obtain our seed from certain sections of northern Wisconsin, producing stock of good green color, and compact habit of growth.

1½-2 " xx	" .....	B&B	1.15	10.00	90.00	.....

### *Thuya occidentalis wareana* (Ware Arborvitae)

Raised by and named for Mr. Thomas Ware, an English nurseryman, who produced it about 1850. It matures at 6 to 8 feet. It is conical in outline and covered with dark green foliage which is somewhat different from the American Arborvitae, being much heavier and deeply crested. The branches are short and stiff. It is much used for foundation planting and frequently for hedges. The name Siberian has been given to it because of its rugged constitution. A symmetrical, compact grower, very long-lived.

## ARBORVITAE (Continued)

**Thuya occidentalis woodwardi**  
(Woodward Arborvitae)

**Thuya occidentalis woodwardi**

(Woodward Arborvitae)

This splendid globe Arborvitae is rapidly becoming one of the most popular varieties. This is due to the fact that it maintains itself well under all conditions and keeps the globe habit without trimming. Specimens reach three feet in diameter. This tree was originated and introduced by Mr. Jacob Manning, proprietor of the Reading Nursery, Reading, Mass., and named after his son, J. Woodward Manning. Our stock is produced from an original tree, presented by Mr. Manning to Mr. Hill many years ago.

We allow 3% discount and box free when cash accompanies order.

The Woodward Arborvitae has for many years been the leading dwarf form in our list. It is a tree which we produce in large quantities and one which has found universal favor wherever American Arborvitae types are adapted. It is a rapid grower, forming a neat compact natural ball shape.

## ARBORVITAE (Biota)

### **Thuya orientalis aurea nana (Berckman Golden Arborvitae)**

The plants we offer are the genuine pure strain of Berckman's Golden Arborvitae, of fine coloring and form. Rich deep golden in color. Compact and bushy. Grows 6 to 8 feet. Stock offered is once transplanted, a point to remember in comparing our trees to potted stock or cuttings.

4- 6 inch x Once Transplanted.....	\$.....	\$.....	\$13.00	\$120.00
6- 8 " x " "	.....	.....	15.00	140.00

### **Thuya orientalis bonita**

A well-named variety, Bonita meaning "pretty." A beautiful, broad, cone-shaped Arborvitae. Rich in color and almost perfect in form. This is a great favorite in many sections. Grows rather slowly, making it very desirable in dwarf groups.

4- 6 inch x Once Transplanted.....	.....	.....	13.00	110.00
6- 8 " x " "	.....	.....	15.00	140.00

### **Thuya orientalis compacta**

A type with compact, broad, cone-shaped growth. Somewhat similar in shape to Berckman's, but having a good green color. A type like this is necessary where the pyramidal forms would be too large. This variety will require a little pruning to keep it in best condition. Ultimate growth about 5 feet in diameter.

4- 6 inch x Once Transplanted.....	.....	.....	10.00	90.00
6- 8 " x " "	.....	.....	12.00	100.00

### **Thuya orientalis conspicua aurea (Goldspire Arborvitae)**

A narrow shaft of bright golden color. Ideal where a tall growing plant is wanted to brighten the landscape.

4- 6 inch x Once Transplanted.....	.....	.....	20.00	190.00
6- 8 " x " "	.....	.....	25.00	240.00

(Beckman Golden Arborvitae)

## ARBORVITAE (Biota) (Continued)

### *Thuya orientalis cupressifolia fastigiata*

Also known as Ramsay's Hybrid. Bluish purple in Winter. Bright green in Summer. Distinct in character of foliage.

	Each	10	100	1000
6-8 inch x Once Transplanted .....	\$.....	\$.....	\$15.00	\$.....

### *Thuya orientalis filiformis* (Threadleaf Arbor Vitae)

A very odd appearing tree having all long threadlike needles entirely different from other varieties. An interesting novelty.

4-6 inch x Once Transplanted .....	.....	.....	15.00	.....
------------------------------------	-------	-------	-------	-------

### *Thuya orientalis elegantissima* (Rollinson's Golden Arborvitae)

A choice form of creamy golden color. Medium height. Conical shape.

4- 6 inch x Once Transplanted.....	.....	.....	20.00	190.00
------------------------------------	-------	-------	-------	--------

### *Thuya orientalis pyramidalis* (Oriental Pyramidal Arborvitae)

Broad at the base, tapering to the top. Straight, symmetrical grower with bright green color. Very desirable as the high plant in Evergreen groups.

4- 6 inch x Once Transplanted.....	.....	.....	10.00	90.00
6- 8 " x " " .....	.....	.....	12.00	110.00
8-10 " x " " .....	.....	.....	15.00	140.00

### *Thuya orientalis pyramidalis* (Baker Pyramidal Arborvitae)

A pyramidal form of great favor among nurserymen. Originated by Baker's Nursery at Ft. Worth.

8-10 inch x Once Transplanted.....	.....	.....	15.00	140.00
------------------------------------	-------	-------	-------	--------

### *Thuya orientalis Texana glauca* (Blue-green Arbor Vitae)

One of the few bluish green Biotas. This variety was introduced a few years ago by the Baker Nursery at Fort Worth. It has proven a popular variety.

6-8 inch x Once Transplanted .....	.....	.....	15.00	.....
------------------------------------	-------	-------	-------	-------

## HEMLOCK

### *Tsuga canadensis* (Canada Hemlock)

The regular conical form, tapering evenly from a broad base to a long, straight, and thrifty shoot, is the common shape of this tree. As a screen or hedge, the Hemlock is greatly admired, as it bears the shears well, grows thrifitly and is of a dark green color, very dense. The results are most satisfactory. The Hemlock will remain small for many years if sheared, so that it can be especially recommended for foundation groups and small yards. The value of our strain of Hemlocks is based on seed selected from northern sources only, insuring trees of hardiness and free, graceful, upright growth. The long, slender branches, drooping gracefully to the ground present so beautiful a picture, it is indeed difficult to surpass it, and when we compare the rich dark green foliage of a healthy plant that is varied so exquisitely with the marked glaucousness of the under side of the leaves, we must admire a tree which presents such diversity of charms. A mistake is made by planting the Hemlock in dry situations; while it cannot thrive in wet and swampy ground, it greatly prefers a rather moist, deep loamy soil and cool location, the better if partially shaded.

3-3½ " xxx " " "	B&B	3.75	36.50	350.00	.....

The production of Hemlock in the Hill Nursery is carried on in a large scale. By cutting back our trees, we are able to offer specimens of exceptionally bushy, compact habit. In the lining out grades, trees have all been several times transplanted, have a good root system, and will be found the most economical stock you can buy.

## EVERGREEN SEEDLINGS

Suitable for Bedding Out. Strong, Thrifty, Well Graded Stock.

The propagation of young Evergreens has been one of our specialties for a great many years, special attention being given to selection of the best strain and truest types. Our soil and climate is especially adapted to their culture. Great care is exercised in selection so that only hardy, dependable types are produced.

# HILL'S EVERGREEN PLATE BOOK

\$3.75 and \$4.50 Postpaid

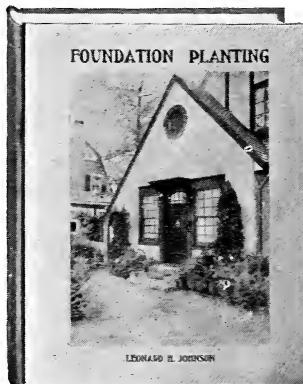

This is a book designed for the use of salesmen. It represents the leading varieties of evergreens in their natural colors, both individual trees and groups. It is the only book of its kind to be had anywhere. Many of the leading nursery firms have been using it for several years. Anyone wishing a copy for inspection will receive one if they will forward their check for \$3.75. If it is not what you want you may return it and we will refund your money.

There are fifty, four-color process plates, made from actual photographs, colored in natural colors and printed on substantial paper. The size of the binder is  $5\frac{1}{2} \times 9$  inches, loose leaf style. Bound with cloth covers, the price is \$3.75 postpaid. Bound with genuine leather cover, \$4.50 postpaid. There are 50 plates.

Ideal Loose Leaf Cover

## HELPFUL BOOKS ON EVERGREENS

### FOUNDATION PLANTING

By Leonard H. Johnson. \$3.50. The finest work yet published covering the use of evergreens for foundation work. 256 pages, contains hundreds of illustrations and helpful suggestions for landscape architects and nurserymen.

### CULTIVATED EVERGREENS

By L. H. Bailey. Postpaid \$3.00. Includes information on landscape gardening, cultivation and adaption for different sections as well as a description of insects, diseases and injuries. 434 pages.

### HARDY EVERGREENS

By Frank A. Schrepfer. Postpaid \$1.35. Written in a very practical way so that it contains a great deal of valuable information for nurserymen. It is described as a practical hand book on evergreens, exclusive of the broad-leaved species.

### EVERGREENS FOR THE SMALL PLACE

By F. F. Rockwell. Postpaid \$1.15. A new 1928 book, exceptionally well prepared and containing valuable material for nurserymen.

### CONIFER COMMENTS

is the title of a 70-page booklet containing practical information about culture of evergreens, and prepared by the D. Hill Nursery Company. Sent upon receipt of 10 cents in stamps to cover cost of mailing.

### HILL'S DESCRIPTIVE CATALOG

This catalog is published every year and one copy is sent free to any nurseryman upon request. Additional copies may be had for 50 cents each. This catalog contains 50 large illustrations, showing evergreens in natural colors.

## XMAS TREES

Supply the  
Xmas Tree Market  
in Your Locality  
With Home  
Grown Trees

You can easily grow a patch of Xmas Trees to supply your local trade. Small transplanted sizes of Norway Spruce rapidly grow into money, bringing in business at the dull season. Each year wild trees are getting scarcer and it will be only a few seasons until the cutting of wild trees will be prohibited. You can start selling in three or four years at \$1.00 each and up. Planted at 2 feet each way you can plant about 10,000 trees per acre.

# How to Reach Our Nursery

Visitors are always welcome. We are conveniently located, only 42 miles northwest of Chicago.

Convenient trains operate on both the C. & N. W. Railway and the C. M. & St. P. Railway between Chicago and Elgin (5 miles from Dundee). At Elgin interurban cars may be used or we will gladly meet trains at Elgin if notified by telephone, Dundee 217.

For an hourly service from Chicago, take the C. A. & E. Electric Line at Wells Street and Jackson Boulevard, direct to Elgin, transferring to the Dundee-Carpenterville car, getting off at Stop No. 4.
